

Extraordinary Technology  
That Lets You Get Back  
To Everyday Living

QUARTET  
TECHNOLOGY, INC.

*Independence by design*

# Freedom. Control. Improved Quality of Life.

## Just a few of the benefits you'll enjoy with Quartet Technology.

Here's a proven way to make challenged living a lot less challenging — not to mention more rewarding. It's Quartet Technology's Simplicity line of Environmental Control Units (ECUs).

Simplicity ECUs allow you to easily perform the everyday tasks of living, giving you back your independence and control. In fact, Simplicity ECUs have allowed thousands of physically challenged people to enrich their lives, to go back to work or school, and improve their quality of life in many meaningful ways.

## Easy to Install, Easy to Use.

A Simplicity ECU installs in your home easily, with no special wiring required.

And once it's installed, you're in control. With surprising ease, a Simplicity ECU allows you to manipulate temperature, lighting, windows and doors, electronic equipment, your personal computer, and much more.

Best of all, you'll have a greater ability to interact with others in today's cyberworld. A Simplicity ECU, a computer, and a phone are all that many people need to allow them to hold jobs, pursue careers, and enhance their lives.

## Custom Built to Your Unique Requirements.

Quartet Technology custom builds each Simplicity ECU to meet your individual needs so that you can enjoy the maximum benefits of Simplicity ECU technology and reliability.

Your Simplicity distributor will work with you to ensure that your ECU is matched to your requirements and preferences.

## Performance You Can Count On.

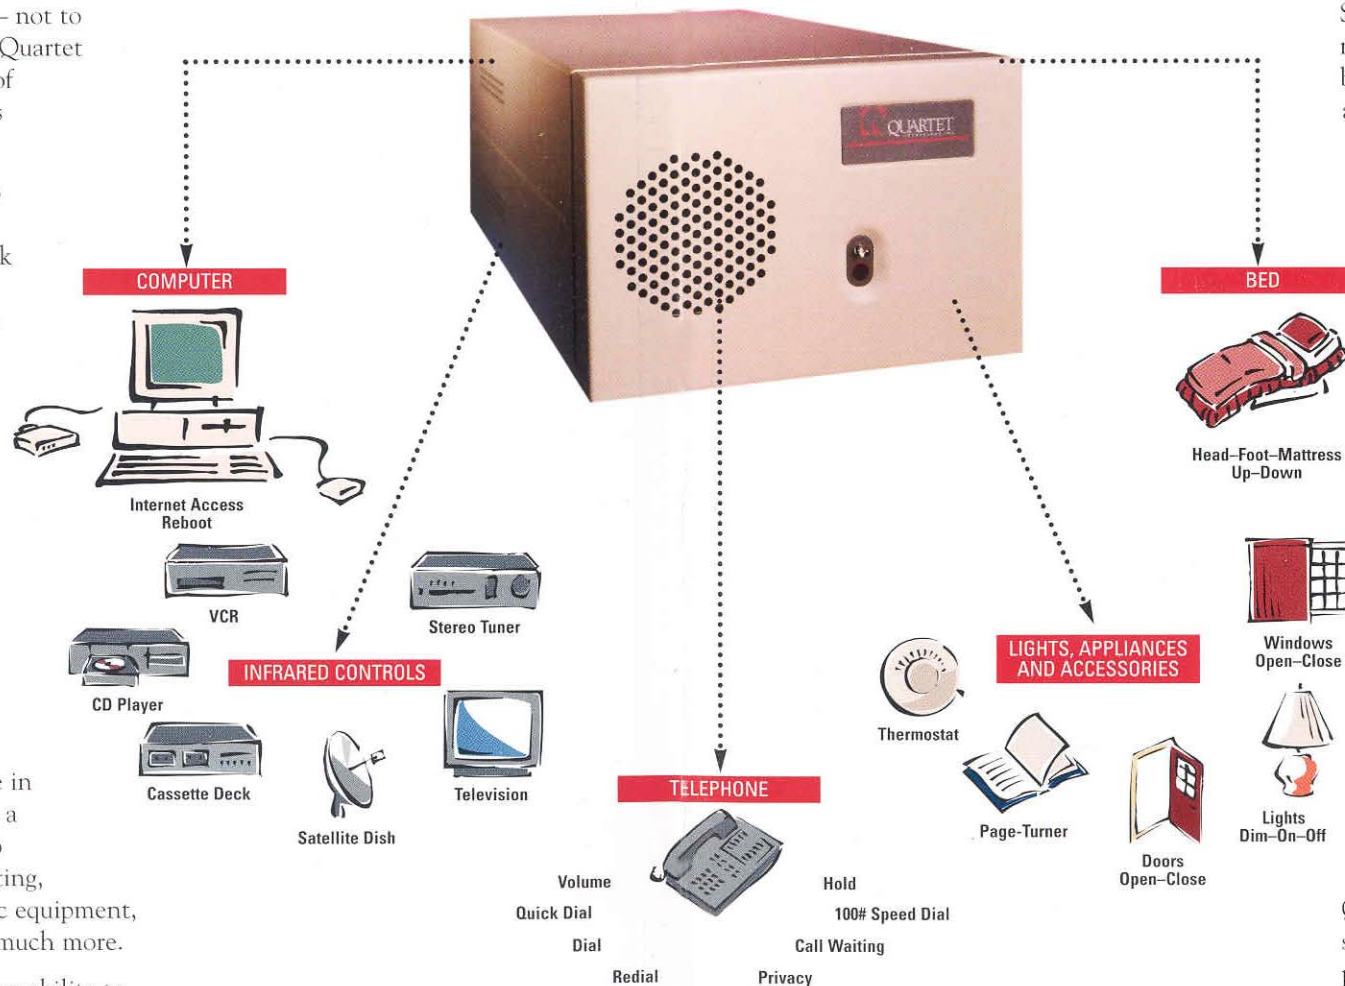

The renowned reliability of Simplicity ECUs sets them apart from other units. Simplicity ECUs work independently from your personal computer, so you're guaranteed round-the-clock, crash-free service.

Quartet provides a built-in back-up battery feature with every Simplicity unit that ensures you can call for help even when the power fails.

And for your added peace of mind, we back each unit with a comprehensive warranty.

Quartet is one of the oldest and most stable ECU providers in the industry. We provide you with more capability for your assistive technology dollar than any other product available. We are fully committed to providing you with the ease and convenience afforded by the most up-to-date technological innovations.

Find out what a difference a Simplicity ECU could make in your life. Please contact us at (978) 957-4328 or [www.qtiusa.com](http://www.qtiusa.com).

### Switch Activated

*Choose whichever input switch works best for you. Unlike other switch-activated devices, Simplicity ECUs use verbal feedback, calling out the selected menu items in a natural-sounding human voice.*

Additional features include:

- Technology that lets you control lights and appliances via existing house wiring.
- Enhanced telephone features such as privacy, volume control, and up to 100 speed dial numbers.
- Programmable infrared control system to operate TVs, VCRs, cable controllers, etc.

### Voice Activated

Need the lights turned on? Want to change TV channels? Just say the word and this Simplicity ECU model will respond. And if you forget a command, the built-in help function presents your options in a natural-sounding voice that guides you to the right command.

Voice activated ECUs give you the same features as a switch ECU, plus:

- Simple voice “training” allows the ECU to learn in a matter of minutes your unique pronunciation of command words.
- For your added convenience, there’s a built-in hands-free telephone with call waiting and speed dial, volume adjustment, privacy features, and voice mail access.

### Voice & Switch Activated

Combining features from both the Simplicity Switch and Simplicity Voice ECUs, the Simplicity All-In-One is ideal if your voice changes by the end of the day. As with all Quartet ECUs, a simple predictable menu system and audible feedback ensure quick training and eliminates the need for cumbersome displays.

### Remote Access

The optional radio remote gives you the freedom to control your ECU from anywhere in your environment.

### Voice Controlled Mouse/ Keyboard Option

For individuals who want to make the most of their computer and Internet experience, the optional VMK™ controller gives the most control with the least assistance.

Add this option to a Simplicity All-In-One or Simplicity Voice ECU and choose the computer control method you prefer (mouse, keyboard, or voice recognition) for each task. The VMK manipulates any computer based software or voice recognition package (Dragon, IBM, etc.) giving you full use of the latest Windows, DOS, Linux, and UNIX software.

And don’t worry about computer crashes – the VMK is independent of your computer, so you can reboot with a simple voice command.
